Abstract — AyurPlus is a mobile-based application designed to digitalize and modernize Ayurvedic healthcare. The app enables patients to book appointments with certified Ayurvedic practitioners, receive personalized remedy suggestions, and purchase recommended medicines through integrated e-commerce platforms. Unlike AI-driven systems, AyurPlus focuses on verified Ayurvedic methods and professional credibility. By combining mobile convenience, authentic practices, and structured management, AyurPlus enhances accessibility, trust, and efficiency in Ayurveda through a modern digital platform.

Keywords — Ayurveda, Healthcare, Mobile Application, E-commerce Integration, Digital Health, Android Development

I. INTRODUCTION

The healthcare industry is experiencing a transformation with mobile technologies that enhance accessibility and personalization. Ayurveda, an ancient Indian system of holistic medicine, holds immense potential to benefit from digital transformation. AyurPlus aims to bridge the gap between patients and Ayurvedic doctors by providing an Android-based app that supports easy consultation scheduling, personalized Ayurvedic advice, and integrated medicine access. The project focuses on building trust through verified practitioners and ensuring user-friendly mobile experiences.

II. EXISTING WORK AND MOTIVATION

Existing systems such as Jiva Ayurveda, Arya Vaidya Sala, and Indian Vaidyas offer partial online services like consultations or product sales, but none combine verified doctor consultations, Ayurvedic remedies, and e-commerce integration in a mobile app. AyurPlus was conceived to fill this gap by offering an end-to-end system for patients to consult doctors, receive remedy suggestions, and directly purchase authentic Ayurvedic products online. The main motivation was to modernize traditional Ayurveda without compromising its authenticity.

III. METHODOLOGY AND SYSTEM DESIGN

The AyurPlus app follows a modular and scalable architecture. The development process used the Prototype Model to collect feedback iteratively. The main modules include:

1) **Appointment Scheduling:** Patients can book appointments with available Ayurvedic doctors.
2) **Remedy Suggestion:** Doctors provide digital remedy prescriptions after consultation.
3) **E-commerce Integration:** Allows direct redirection to online stores like Amazon, Blinkit, or Flipkart.
4) **Admin Panel:** Handles user data, appointments, remedies, and system security.

The app was developed using Java and XML in Android Studio, and Firebase was used for authentication, data storage, and cloud synchronization.

IV. IMPLEMENTATION AND RESULTS

The AyurPlus prototype was tested among a group of users including students and Ayurvedic practitioners. The results indicated high usability and reliability. Key outcomes include:

- Seamless mobile appointment booking and user authentication.
- Quick and secure Firebase database operations.
- Integrated Ayurvedic remedy recommendations and e-commerce links.
- Positive feedback on app interface and usability.
- Efficient admin controls for managing users and appointments.

V. SOFTWARE TESTING

Software testing involved Unit, Integration, and User Acceptance Testing (UAT). Unit testing verified individual modules like booking, login, and remedy modules. Integration testing ensured seamless data flow between the modules. UAT confirmed the app's usability and responsiveness across multiple Android devices. The results demonstrated a stable, error-free system with quick response times and minimal crashes.

VI. CONCLUSION AND FUTURE WORK

AyurPlus successfully integrates traditional Ayurvedic practices into a digital ecosystem through a user-friendly mobile application. It connects patients, doctors, and medicine providers under one platform. Future enhancements include adding AI-assisted health insights, video consultations, and

expansion to iOS. AyurPlus is a step toward making Ayurveda globally accessible, credible, and convenient.
